companies all over the world try their best to improve their business by implementing efforts such as six sigma lean manufacturing or a

combination of the two methodologies logic would tell you that these two methods would be the right approach because you would have an improvement method that through lean reduces waste and make value flow while six sigma reduces and controls variation if this were true then why is it that many of these initiatives simply aren't delivering quantifiable bottom line results after having studied many of these on going improvement efforts the author believes that these efforts are missing an important focusing mechanism that is most of these improvement efforts attempt to improve everything rather than finding that key part of the system that should be assessed and improved the constraining factor and then focusing the improvement efforts there and only there the hallmark of this book is how to first locate this constraining factor and then determine the best way to exploit it to generate extreme profits radically improve on time delivery of products or services and increase market share by outperforming your competition at rates you never expected possible how do we do this by combining lean and six sigma with the theory of constraints this book demonstrates both the basics of improvement i.e. results with the how to i.e. the methodology in a very simple format that everyone within your organization will understand

Beautifully designed and accessible, a beautiful constraint will appeal beyond its core business audience to anyone who needs to find the opportunity in constraint. The book takes the reader on a journey through the mindset, method, and motivation required to move from the initial victim stage into the transformation stage. It challenges us to examine how we've become path dependent, stuck with routines that blind us from seeing opportunity along new paths. Ask propelling questions to help us break free of those paths and put the most pressing and valuable constraints at the heart of our process. Adopt a can-if-mentality to answer these questions focused on how, not if. Access the abundance to be found all around us to help transform constraints. Activate the high-octane mix of emotions necessary to fuel the tenacity required for success. We live in a world of seemingly ever-increasing constraints, driven as much by an overabundance of choices and connections as by a scarcity of time and resources. How we respond to these constraints is one of the most important issues of our time and will be a large determinant of our progress as people, businesses, and planet in the future. A beautiful constraint calls for a more widespread capability for constraint-driven problem solving and provides the framework to achieve that.

This book contains the thoroughly refereed papers from the 9th International Ershov Informatics Conference PSI 2014 held in St. Petersburg, Russia, in June 2014. The volume also contains 5 keynote talks which cover a range of hot topics in computer science and informatics. The papers cover various topics related to the foundations of program and system development and analysis, programming methodology, and software engineering and information technologies.
